DECLARATION

I hereby declare that this submission is my own work and that, to the best of my knowledge and belief, it contains no material previously published or written by another person nor material which to a substantial extent has been accepted for the award of any other degree or diploma of the university or other institute of higher learning, except where due acknowledgment has been made in the text.

Name : ADHIRAJ PANDEY

Roll No. - 2000681540004

CERTIFICATE

This is to certify that Project Report entitled orchid shopping – is submitted by Adhiraj Pandey(200681540004) in partial fulfilment of the requirement for the award of degree B. Tech. in Department of CSE(Data Science) of MIET of Dr. A.P.J. Abdul Kalam Technical University U.P Lucknow is a record of the candidate own work carried out by her under my supervision.

The matter embodied in this Project report is original and has not been submitted or the award of any other degree.

DATE : 15.01.22

Supervisor

MS. VIDHU JAIN

ACKNOWLEDGEMENT

It gives us a great sense of pleasure to present the report of the B. Tech Project undertaken during B.Tech 2ND year. I owe special debt of gratitude to our guide MS.VIDHU JAIN, Department of CSE, Meerut Institute of Engineering and Technology, Meerut for her constant support and guidance throughout the course of our work. Her sincerity, thoroughness and perseverance have been a constant source of inspiration for us. It is only his cognizant efforts that our endeavors' have seen light of the day. We also do not like to miss the opportunity to acknowledge the contribution of all faculty members of the department for their kind assistance and cooperation during the development .

Name : Adhiraj Pandey

Roll No. :2000681540004

OBJECTIVE

The objective of the project is to make an application in android platform to purchase items in an existing shop. In order to build such an application complete web support need to be provided. A complete and efficient web application which can provide the online shopping experience is the basic objective of the project. The web application can be implemented in the form of an android application with web view

PROJECT OVERVIEW

The central concept of the application is to allow the customer to shop virtually using the Internet and allow customers to buy the items and articles of their desire from the store. The information pertaining to the products are stores on an RDBMS at the server side (store).

The Server process the customers and the items are shipped to the address submitted by them. The application was designed into two modules first is for the customers who wish to buy the articles. Second is for the storekeepers who maintains and updates the information pertaining to the articles and those of the customers. The end user of this product is a departmental store where the application is hosted on the web and the administrator maintains the database. The application which is deployed at the customer database, the details of the items are brought forward from the database for the customer view based on the selection through the menu and the database of all the products are updated at the end of each transaction. Data entry into the application can be done through various screens designed for various levels of users. Once the authorized personnel feed the relevant data into the system, several reports could be generated as per the security.

PROJECT SCOPE

This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains. The system recommends a facility to accept the orders 24*7 and a home delivery system which can make customers happy.

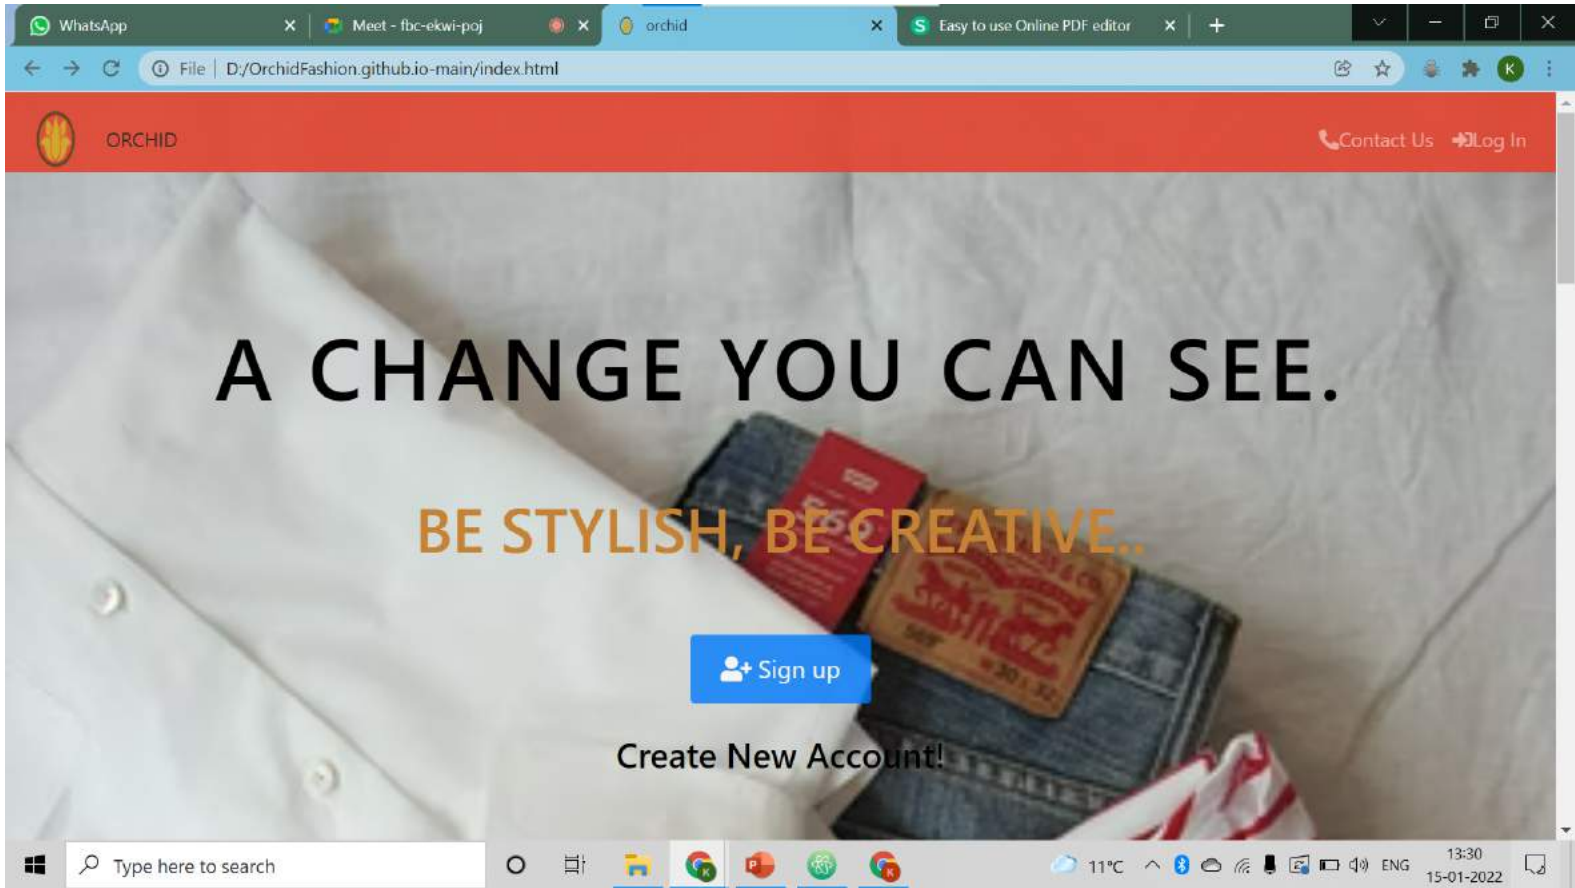

If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as flipcart or ebay. Since the application is available in the Smartphone it is easily accessible and always available.

PROPOSED SYSTEM

In the proposed system customer need not go to the shop for buying the products. He can order the product he wish to buy through the application in his Smartphone. The shop owner will be admin of the system. Shop owner can appoint moderators who will help owner in managing the customers and product orders. The system also recommends a home delivery system for the purchased products

Kids-Section:

The screenshot displays a web development project in VS Code. The left sidebar shows a file explorer with folders for 'Project' and 'stylesheets', and files for 'index.html', 'JEWELLERY-SECTION.HTML', 'KIDS-SECTION.HTML', 'login.html', 'man-section.html', 'README.md', 'responsive.css', 'signup.html', and 'WOMEN-SECTION.HTML'. The main editor area shows the 'KIDS-SECTION.HTML' file with HTML code for a grid layout. The code includes a header for 'BOTTOM WEAR...', a row of four columns, and a row of four columns for 'JEANS'. It uses Bootstrap classes for grid layout (col-lg-3, col-md-4, col-sm-6) and includes image tags for 'img1' through 'img4'. The code also includes a row for 'JACKET' and a row for 'ETHNIC WEAR'.

```

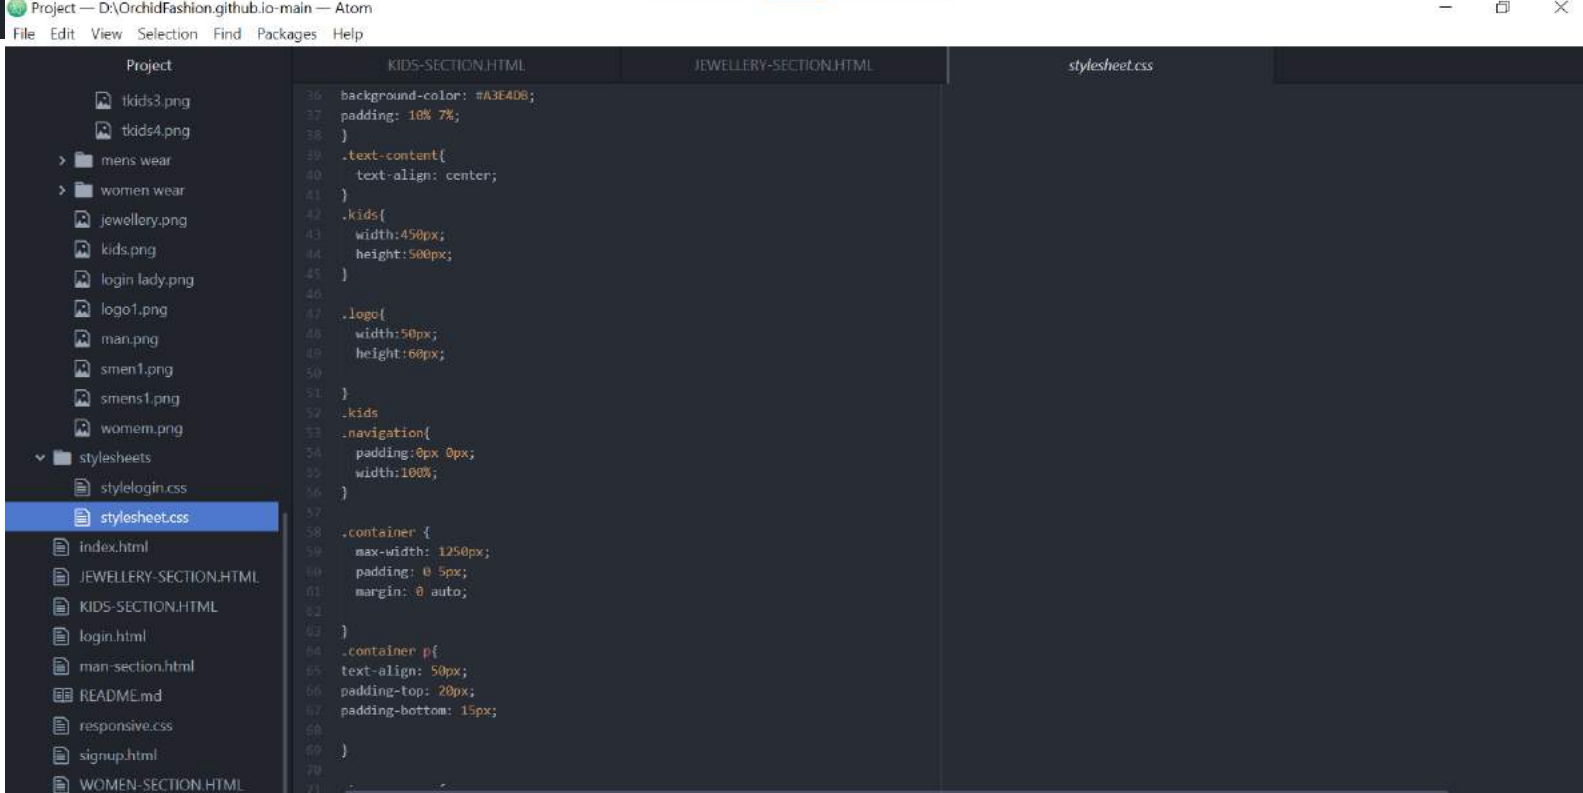

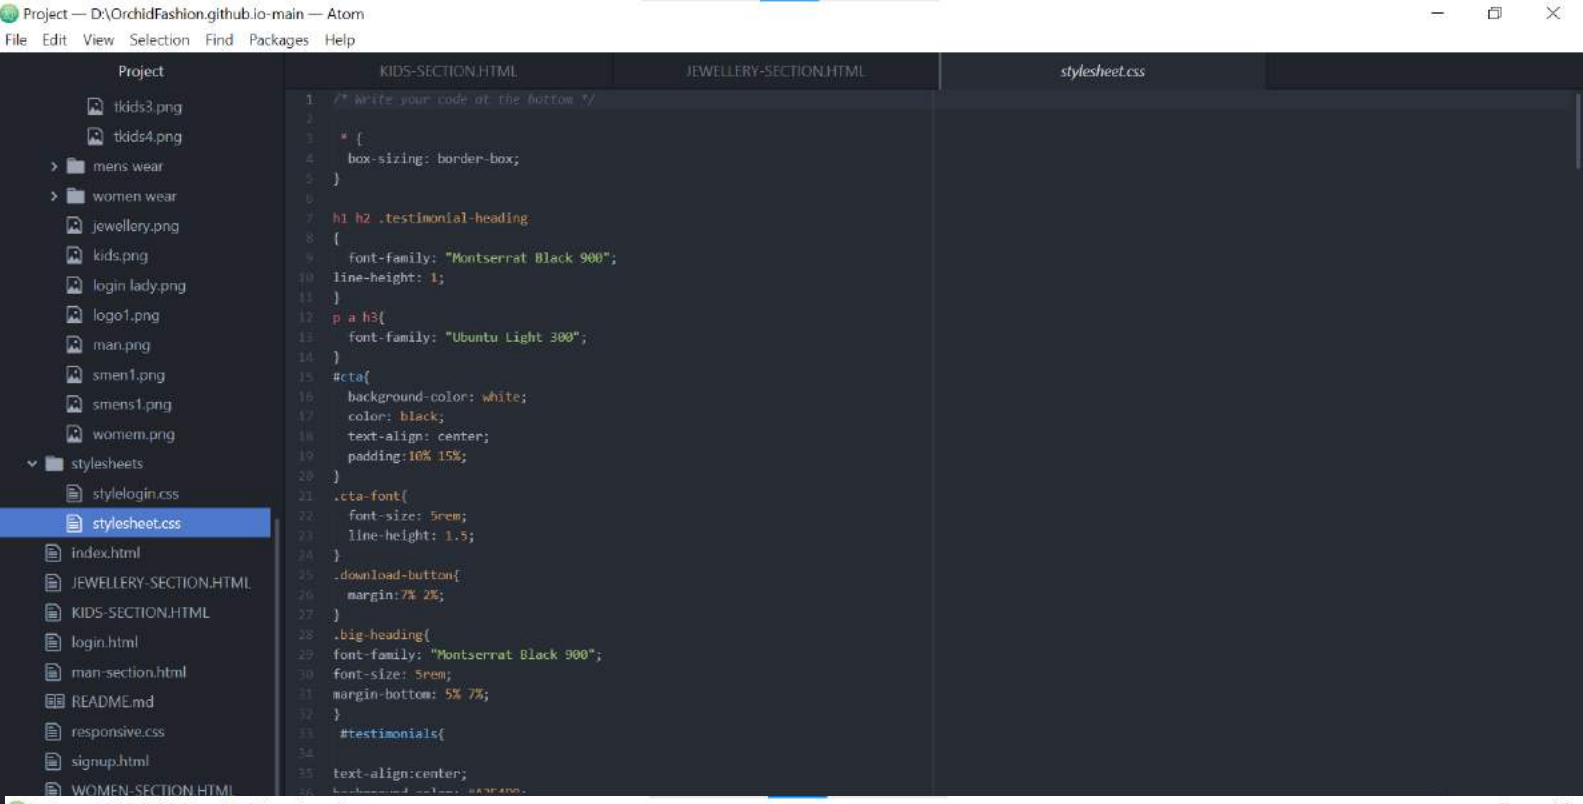

<!--
<H1 class="jeans">BOTTOM WEAR...</H1>
<div class="row">
